

ABSTRACT OF THE DISCLOSURE

Systems and methods that provide remote access are described. In one embodiment, a system may include, for example, a plurality of communication devices and a media device. The plurality of communication devices may be operatively coupled to a network and may include, for example, a native communication device. The media device may be operatively coupled to the native communication device and the network. The media device may be associated with the native communication device and the network and may be capable of exchanging media content with the plurality of communication devices and the network. A profile of the media device may be stored in at least one of the media device and the native communication device. The profile may include, for example, information related to managing the media content when the media device is roaming.
